INSTRUMENTS

EndoDrill® GI – EUS-CNB

EndoDrill® GI is the world's first US FDA-cleared and EU CE-approved electric-driven core needle biopsy for endoscopic ultrasound (EUS-CNB). EndoDrill® consists of a sterile core needle biopsy instrument with an associated drive system.

"This device will be a game changer in my opinion"¹

Developed together with users to achieve:

- Easy set-up and operation.⁴
- Consistent solid core needle biopsies (CNB) with high diagnostic accuracy.^{2,3,4}
- Core tissue specimens suitable for both histological and genetic analysis.^{2,3,4}
- Potentially shorter procedure with motorised rotation, fewer passes required.⁴
- Clinically-experienced high precision and control with electric-driven high-speed rotation.
- Motorised sampling with manually controlled depth and direction for tactile feel.
- Ultra-flexible instrument working with a highly angled endoscope.⁴
- High quality biopsies obtained without additional techniques, e.g. suction and ROSE.^{2,3,4}

➤ Procedure using EndoDrill® GI EUS-CNB 17G

➤ EUS view of core drill cutting with high visibility

➤ Cohesive core needle biopsies

➤ Histological slides showing desmoid tumor in stomach (4X, H&E)

Ordering information

Article Name	Article Number	Order Quantity	Needle Size (Gauge)	Adjustable Needle Length (cm)	Minimum Accessory Channel (mm)
EndoDrill® GI Biopsy Instrument	13001	3	17	0–6	2.8
EndoDrill® GI Biopsy Instrument	13002	5	17	0–6	2.8
EndoDrill® Drive System	3000-01	1	Complete reusable system including motor unit, power supply cable, foot pedal and drive cable		

EndoDrill® GI is intended to be used with an ultrasound endoscope for ultrasonically guided fine needle sampling of submucosal- and extramural lesions within gastrointestinal tract, i.e. esophagus, mediastinal masses, stomach, pancreas, liver, small- and large intestines, lymph nodes and perirectal masses. This device is for diagnostic purposes only.
